SUMMARY

Recent Cloud Computing graduate with hands-on experience in **AWS, Docker, Kubernetes, Terraform, GitHub Actions, and Argo CD** built through DevOps and cloud internships and projects. Experienced in automating build and deployment workflows with CI/CD and provisioning infrastructure as code. Looking for an entry-level DevOps / Cloud Engineer role to grow in cloud and automation.

TECHNICAL SKILLS

Cloud:	AWS (EC2, S3, VPC, IAM, EKS, ECR, ALB, RDS, Lambda, API Gateway, DynamoDB, CloudWatch, SNS)
DevOps Tools:	Git, GitHub, GitHub Actions, Jenkins, Argo CD, Maven, Docker, Kubernetes (EKS), Terraform
Monitoring:	Prometheus, Grafana, AWS CloudWatch
Systems:	Linux, Networking (VPC, Security Groups, Load Balancers, DNS)
Languages:	Python, SQL

EXPERIENCE

DevOps Engineer Intern — Namaah Pvt Ltd | Mar 2026 – Sep 2026

- Built and maintained **CI/CD pipelines using GitHub Actions** to automate build, test, and deployment of the application across development and testing environments.
- Managed and monitored **AWS EC2** servers hosting application workloads, including instance setup, configuration, and access control with Security Groups.
- Containerized the application with **Docker** and deployed and managed containers on **Amazon EKS (Kubernetes)**, ensuring consistent and reproducible environments.
- Monitored application and infrastructure logs and metrics with **AWS CloudWatch**, set up **alerts** for failures and resource issues, and performed **root-cause analysis** to resolve incidents and improve service reliability.

AWS Cloud Intern — F13 Technologies | Oct 2025 – Jan 2026

- Managed AWS resources (**EC2, S3, RDS, VPC, Security Groups**) supporting application environments.
- Built serverless workflows with **AWS Lambda** and **API Gateway** to automate backend operations and reduce infrastructure costs.
- Optimized cloud costs with **S3 lifecycle policies** and strengthened security through **IAM** access controls.

Machine Learning Intern — Infosys Springboard | Oct 2024 – Dec 2024

- Built unsupervised anomaly-detection models (deep learning **autoencoders**) on healthcare provider data for fraud detection.
- Performed exploratory data analysis, preprocessing, and feature engineering; documented findings for business stakeholders.

PROJECTS

E-Commerce Microservices DevOps Pipeline — Terraform, EKS, GitHub Actions, Argo CD

- Provisioned an **EKS cluster inside a VPC** using reusable **Terraform modules** (Infrastructure as Code).
- Built CI/CD for a Java microservice with **GitHub Actions** and **Argo CD**, achieving single-touch, end-to-end automation.
- Applied containerization, orchestration, IaC, and CI/CD across a multi-microservice architecture.
- Exposed the frontend securely to external users using **load balancers** and **Route 53** DNS mapped to the domain provider.

Serverless Inventory Management System — Lambda, DynamoDB, SNS, Cognito, Amplify

- Designed a serverless backend with **Lambda, API Gateway, and DynamoDB** for scalable inventory operations.
- Automated real-time inventory alerts using **DynamoDB Streams**, Lambda triggers, and **Amazon SNS**.
- Deployed a React dashboard on **AWS Amplify** with **Cognito** authentication and role-based authorization.

Kubernetes End-to-End Deployment on Amazon EKS — EKS, Kubernetes, eksctl, ALB Ingress, Fargate

- Deployed a containerized application (2048 game) on **Amazon EKS** using **eksctl**, with Kubernetes **Deployments, Services, and Namespaces** inside a custom VPC.
- Configured the **AWS Load Balancer Controller (ALB Ingress)** to expose the application through an external **Application Load Balancer** with secure routing to private workloads.
- Set up **IAM OIDC integration** and ran workloads on **AWS Fargate**, removing the need to manage EC2 worker nodes.

EDUCATION

B.Tech in Computer Science (Cloud Computing) — 2026
Alliance University | CGPA: 8.2 / 10

CERTIFICATIONS & ACHIEVEMENTS

- AWS Cloud Practitioner Essentials (AWS Training) | Nov 2025
- Finalist (Top 3), Code Sangram Hackathon – competitive coding and innovation event
